Before going into the facts, and basic math, first let me explain, what my basic theory is. I am a retired engineer, who designed transmitter and receiver electronics, for many companies, including TWA, Bendix, Northrop, Sprint and several others. These are, but examples, in order, to convince others, to consider, this theory, with an open mind. It's called, The Wenner Time Chill Dilation Theory. What this theory states, is that, the current theory, of Universe Expansion, with Acceleration, is only one way, to interpret, the data, from the spectrometer readings, of Hubble, and other similar observations, since.

Red shift, usually caused by the Doppler Shift Effect, indicates the universe is now in, an accelerated expansion. It shows the light, of galaxies far away, to be shifted more to the red color, in a spectrometers, prism spectrum display, then galaxies, that are close, to us. My theory, is that the universe, did not even require a big bang, only an extremely hot, nuclear fusion, plasma source, that started cooling, and spreading out matter, a long time ago. It also, could have been, a big bang, as currently suggested, with much less expansion, and even if so, my theory, still works.

If time, as I suggest, has slowed down, then the Universe red shift data, shown, would also be the same, as it is now, and not require a big bang, but having a much smaller expansion, and likely now, near absolute zero temperature, and be nearly static, with minimal time dilation. With, the microwave background noise temperature, still slowly cooling off, but never quite reaching, absolute zero.

It just takes much more time, to move between objects, in our current universe, then it did, a long time ago. The red shift seen, is time dilation, not expansion, with acceleration, but instead, my theory suggests, is time slowing, causing the visible galaxy separation increase, with no Doppler effect required.

This, Universe Time slowing, also gives, exactly, the same Red Shift numbers, as does Doppler Shift today. More data, than just Red Shift, is required, to truly prove, either way, which theory, is likely correct.

Before this, time, the fourth dimension, I believe, was moving much faster, but as the universe cooled, time started slowing down. It has now cooled down allot. If we check it, right now, at any long distance, from any star that will heat up, the object, being measured surface. It is only, 2.7 degrees Kelvin. Near the current temperature, of Pluto's surface. Yes, this is only 2.7 degrees above absolute zero. This is also, the temperature, right now, of the Microwave background noise. It was at a much higher temperature in the beginning. Measured frequency waves then, were also much higher, in the plasma's emitted radiation. An ultraviolet frequency, that measured 800 mega-mega cycles, that's 8 to the 14 power, is now picked up, at a much lower microwave frequency, of 375 GC, that's 3.75 to the 11 power. This is also demonstrated, in current Red Shift data. It is has been proven, higher frequency, has higher energy level, then lower frequency. Time increasing, I believe, cost this energy.

A good example, is that, Einstein proved, and has been verified many times. Time is relative, depending on what time dimension, you are in, when compared to another. What if your current position, right now, and the earths, was instead, in the Andromeda Galaxy, as just an example, not the Milky Way. It may only take 1 second, to walk 10 feet, but on Milky Way's Earth, it takes you 2 seconds, to walk 10 feet. Either way, it seems to you, when walking, the same amount of time 1 second.

Pg3 of 3

In other words, space and location, depend, on the scale of time, which changes relatively, all over in our universe. One second, somewhere else, is a different length of time, yet only seen as different, to an observer in a different, time dimension. Since Andromeda, is not traveling thru space, at the same speed, as our Milky Way galaxy, Einstein, and many others following, proved, it is in a different time dimension. Thus, at least one form of time dilation, has been proven.

First let me show a video, of what frequency and wavelength mean, then show very basic math, to demonstrate my theory, along with examples. At the end, I will show the links, to my website, nucow.com, where, a hard pdf copy, of my theory, can be printed out anytime, 24/7, totally free, with no garbage attached.

Pause the video, when the link is being shown, so you can write it down, and place it, into your browser. I did this, so it's in the video, and not easily deleted.

I have no current desire, to write another, dull research paper, for any scientific journal, and have them, dictate format, and profit, from selling copies, of this theory, in a research paper form. It is not only, for others, in an academic field, but free for anyone, with a minimal of mathematics, to understand, and consider.

This theory, is provided openly, in the hope, someone will do additional, research, to further advance its validity. As theory author, a reference to me, used in additional research, will be appreciated.

All reasonable thoughts, or comments, on this video. I will consider, and are welcome. So let's begin.
